

# SECURE YOUR ONLINE SELF

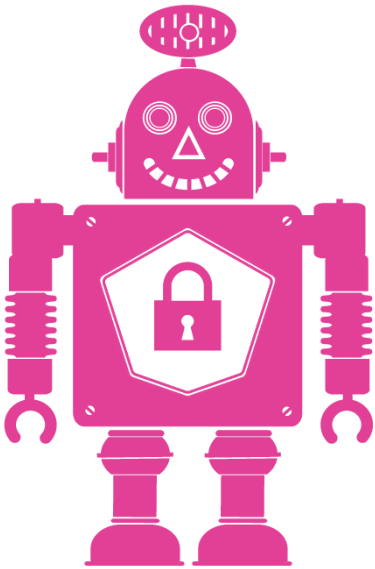

**Cyber Smart Week** gives us all  
a chance to check out our  
online selves.

# USE UNIQUE PASSWORDS

Have a **different** password for  
each of your accounts

# USE UNIQUE PASSWORDS

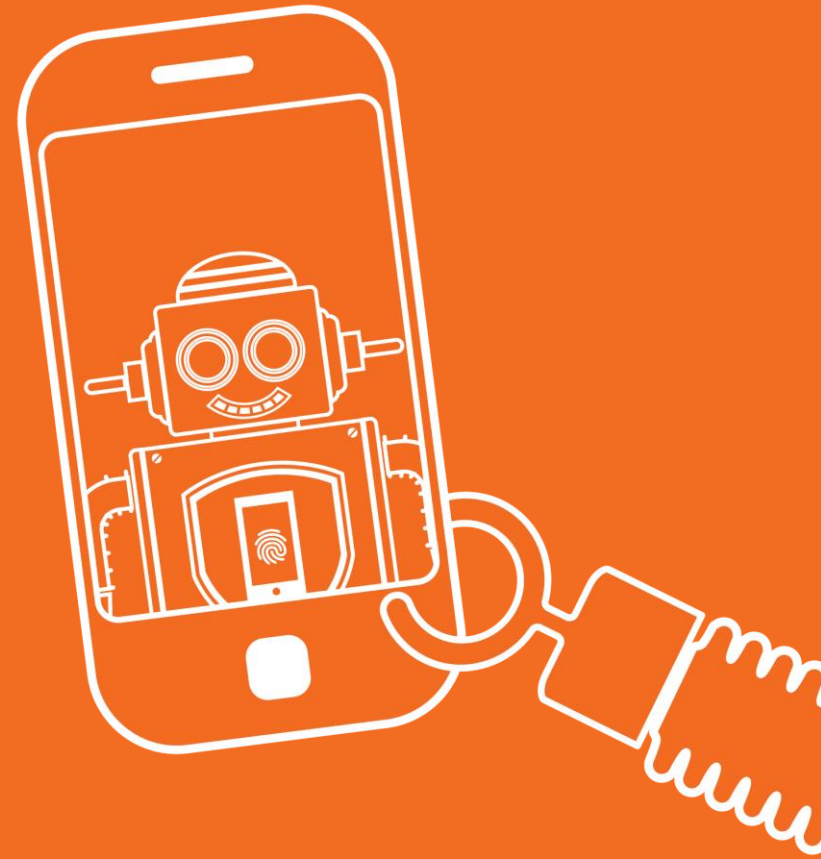

## The key points for unique passwords are:

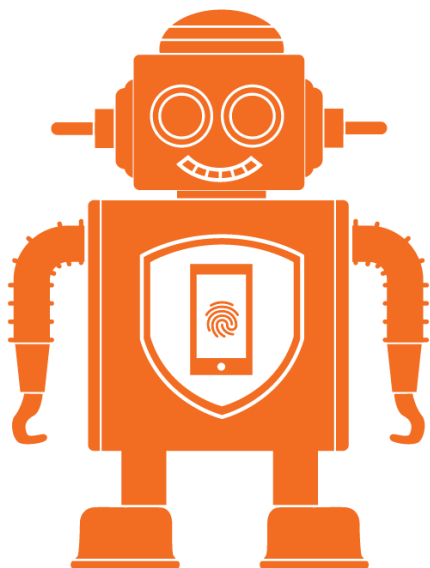

- If you use the same password for everything, if that password gets leaked or lost, you need to change all of your passwords.
- You may not know that someone has got hold of your password until it's too late – if you're using the same one for everything the damage could already be done.

# TURN ON 2FA

Make your online accounts **more secure** with two-factor authentication. It's often a password, and something else, like a code sent to another device.

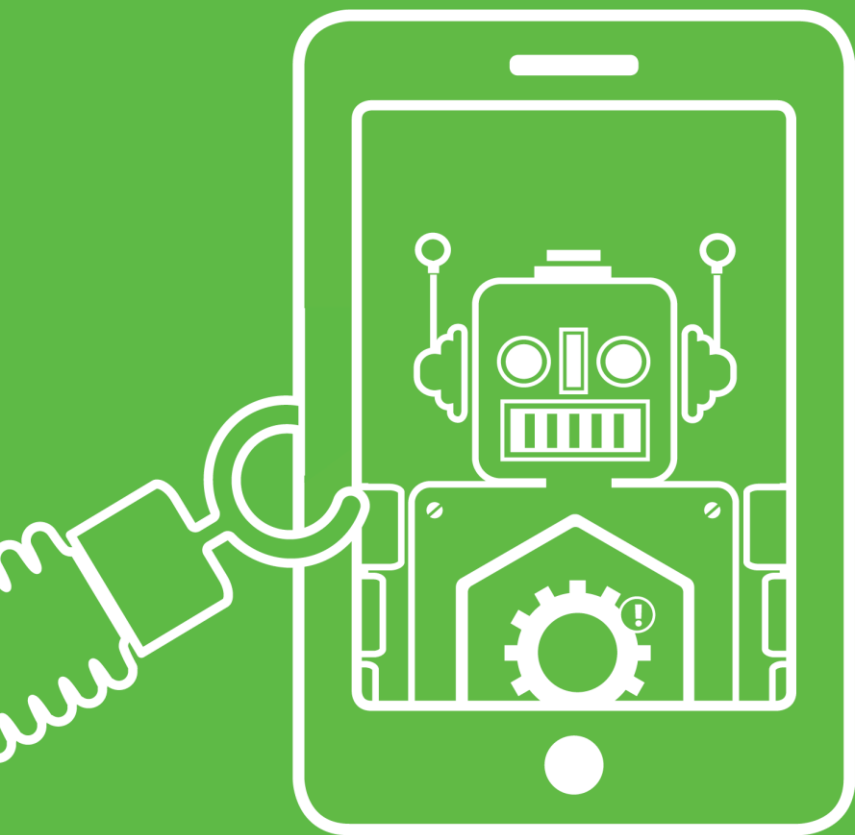

# TWO-FACTOR AUTHENTICATION (2FA)

## The key points for 2FA are:

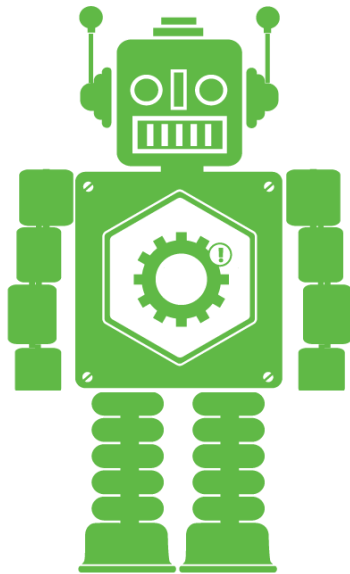

- 2FA is simple to set up but adds another layer of protection to your accounts.
- 2FA means that when you log into accounts you'll be asked for a second thing, like a code from an app, before you can log in.. Typically a smartphone text message with a code

# UPDATE YOUR APPS

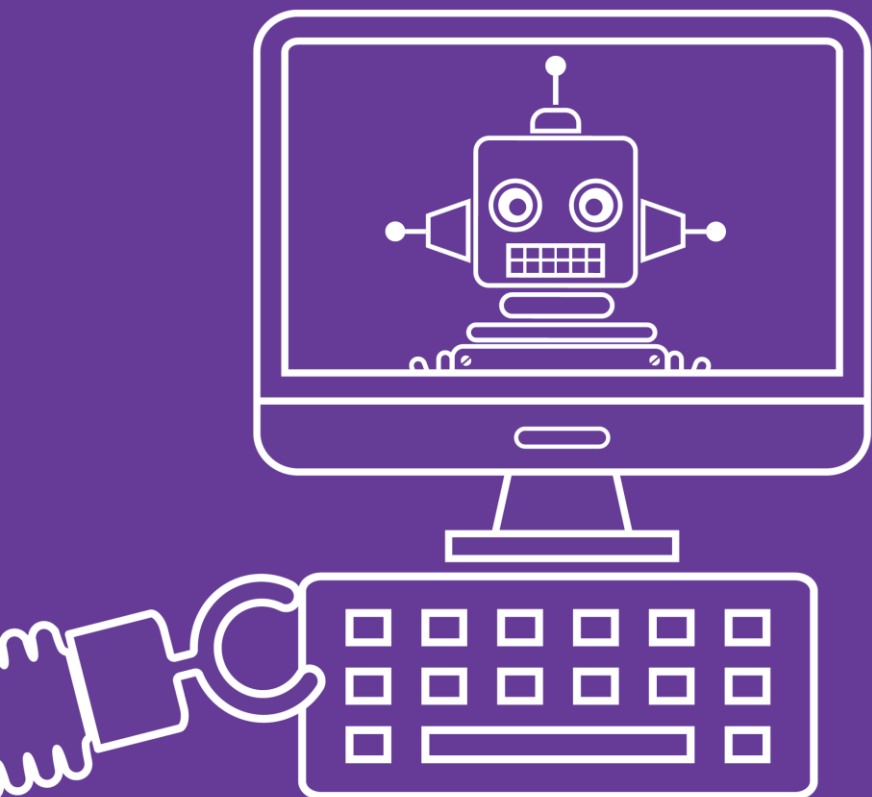

Keeping your apps up to date is a really good way to **defend yourself** against bugs and viruses.

# UPDATE YOUR APPS

## The key points for updating apps are:

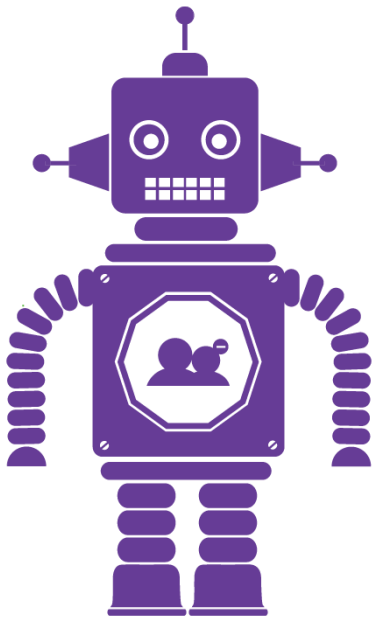

- Updates help keep you safe. If you haven't applied updates it's like locking your front door but leaving the window wide open.
- Updating apps, and operating systems is one of the easiest things you can do to protect yourself.

# CHECK YOUR PRIVACY SETTINGS

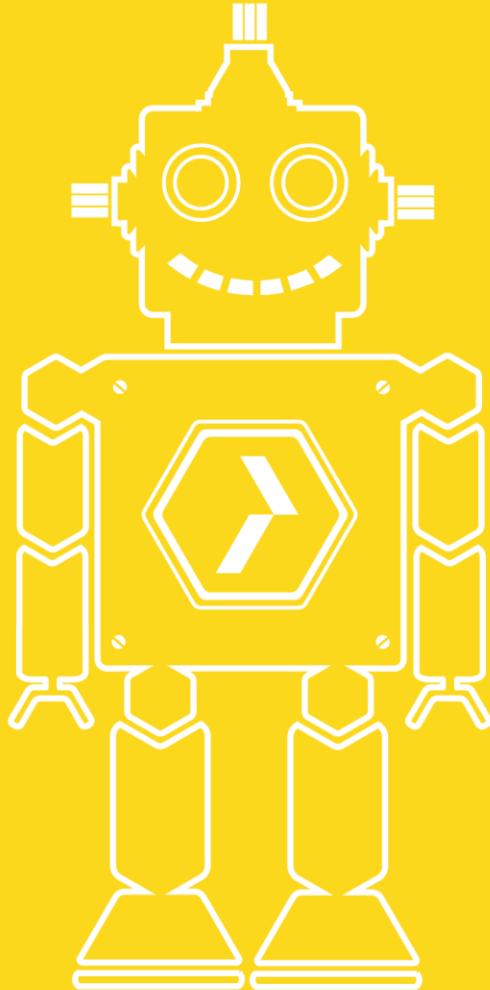

Set your privacy settings so you  
**know exactly who can see**  
what you post on social media.

# CHECK YOUR PRIVACY SETTINGS

## The key points for checking privacy settings are:

- If you're sharing lots of personal info online, it can be used against you.
- Keeping on top of your privacy settings means you've got better control of your data and who can see what.

## REPORT IT

If you experience a cyber security issue make sure you report it using our reporting form at **cert.govt.nz** or call **0800 CERT NZ** (0800 2378 69) (Mon-Fri 7am – 7pm)

# Get Cyber Smart this week

Check out the Cyber Smart website for more tips and resources for building your cyber defence.
